

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A data recording method for recording digital data to a recording medium, comprising the steps of:

obtaining a unique recording medium ID corresponding to the recording medium  
from a predetermined region of the recording medium, the recording medium ID pre-  
recorded on the predetermined region of the recording medium;

generating independent write identification information for every recording operation performed on the digital data;

encrypting data identification information of the digital data and data control information by the use of the write identification information and encrypting the write identification information by use of the recording medium ID; and

recording at least the encrypted data identification information and data control information to the recording medium.

Claim 2 (Original): The data recording method as set forth in claim 1, wherein the digital data is encrypted by the data identification information, and the encrypted digital data is recorded to the recording medium along with the encrypted data identification information and data control information, and the write identification information.

Claim 3 (Original): The data recording method as set forth in claim 1, wherein the data control information includes copy control information for the digital data.

Claim 4 (Previously Presented): The data recording method as set forth in claim 1, wherein the encrypted data identification information and data control information, and the

write identification information are encrypted by the use of recording medium unique to the recording medium and recorded to the recording medium.

Claim 5 (Original): The data recording method as set forth in claim 1, wherein a data processing unit for encrypting the data identification information and data control information and a data recording unit for recording data to the recording medium are mounted separately, and the write identification information is generated at the data recording unit, and the generated write identification information is encrypted and transmitted to the data processing unit.

Claim 6 (Currently Amended): A data recording apparatus for recording digital data to a recording medium, comprising:

means for obtaining a unique recording medium ID corresponding to the recording medium from a predetermined region of the recording medium, the recording medium ID pre-recorded on the predetermined region of the recording medium;

means for generating independent write identification information for every recording operation performed on the digital data;

means for encrypting data identification information of the digital data and data control information by the use of the write identification information and encrypting the write identification information by use of the ID recording medium; and

means for recording at least the encrypted data identification information and data control information to the recording medium.

Claim 7 (Original): The data recording apparatus as set forth in claim 6, wherein the digital data is encrypted by the data identification information, and the encrypted digital data

is recorded to the recording medium along with the encrypted data identification information and data control information, and the write identification information.

Claim 8 (Original): The data recording apparatus as set forth in claim 6, wherein the data control information includes copy control information for the digital data.

Claim 9 (Previously Presented): The data recording apparatus as set forth in claim 6, wherein the encrypted data identification information and data control information, and the write identification information are encrypted by the use of recording medium ID unique to the recording medium and recorded to the recording medium.

Claim 10 (Currently Amended): A data recording and/or reproducing system, comprising:

a data processing apparatus for encrypting data identification information of digital data and data control information; and

a data recording and/or reproducing apparatus for recording the encrypted data identification information and data control information from the data processing apparatus to a recording medium,

wherein the data recording and/or reproducing apparatus is configured to obtain a unique recording medium ID corresponding to the recording medium from a predetermined region of the recording medium, the recording medium ID pre-recorded on the predetermined region of the recording medium, and has means for generating independent write identification information for every recording operation performed on the digital data, and means for recording the encrypted data from the data processing apparatus to the recording

medium, said write identification information being encrypted through use of said recording medium ID, and

wherein the data processing apparatus encrypts the data identification information of the digital data and data control information by the use of the write identification information from the data recording and/or reproducing apparatus, and transmits the encrypted data to the data recording and/or reproducing apparatus.

**Claim 11 (Previously Presented):** The data recording and/or reproducing system as set forth in claim 10, wherein the digital data is encrypted by the data identification information, and the data recording and/or reproducing apparatus records the encrypted digital data to the recording medium along with the encrypted data identification information and data control information.

**Claim 12 (Original):** The data recording and/or reproducing system as set forth in claim 10, wherein the data control information includes copy control information for the digital data.

**Claim 13 (Previously Presented):** The data recording and/or reproducing system as set forth in claim 10, wherein the data recording and/or reproducing apparatus encrypts the encrypted data identification information and data control information from the data processing apparatus, and the write identification information by the use of recording medium ID unique to the recording medium, and records the encrypted data to the recording medium.

Claim 14 (Original): The data recording and/or reproducing system as set forth in claim 10, wherein the data recording and/or reproducing apparatus authenticates the data processing apparatus when transmitting the write identification information thereto, and encrypts the write identification information and transmits the encrypted data to the data processing apparatus when it is proved to be authorized.

Claim 15 (Currently Amended): A data reproducing method for reproducing digital data from a recording medium, comprising the steps of:

reproducing encrypted data identification information and data control information, and write identification information, which are encrypted by the use of a unique recording medium ID obtained from a predetermined region of the recording medium, the recording medium ID pre-recorded on the predetermined region of the recording medium and corresponding to the recording medium and are embedded in the digital data;

decrypting the encrypted data identification information and data control information by the use of the write identification information created during the reproducing, and obtaining the data identification information of the digital data and data control information, wherein the data identification information and data control information is generated for every recording operation performed on the digital data.

Claim 16 (Previously Presented): The data reproducing method as set forth in claim 15, wherein the digital data is encrypted by the data identification information and recorded to the recording medium, and the encrypted digital data is reproduced from the recording medium along with the encrypted data identification information and data control information.

**Claim 17 (Previously Presented):** The data reproducing method as set forth in claim 15, wherein the encrypted data identification information and data control information, and the write identification information are encrypted by the use of the recording medium ID unique to the recording medium and recorded to the recording medium, and the recording medium ID is reproduced from the recording medium, and the data encrypted by the recording medium identification information are decrypted by the use of the recording medium ID, and the encrypted data identification information and data control information, and the write identification information are taken out.

**Claim 18 (Original):** The data reproducing method as set forth in claim 15, wherein a data processing unit for encrypting the data identification information and data control information and a data recording unit for recording data to the recording medium are mounted separately, and the write identification information is generated at the data recording unit, and the generated write identification information is encrypted and transmitted to the data processing unit.

**Claim 19 (Currently Amended):** A data reproducing apparatus for reproducing digital data from a recording medium, comprising:

means for reproducing encrypted data identification information of the digital data and data control information, which are encrypted by the use of independent write identification information created for every recording operation performed on the digital data, and the write identification information from the recording medium;

means for decrypting the encrypted data identification information and data control information by the use of the write identification information, and obtaining the data identification information and data control information from the reproduced data; and

means for decrypting the write identification information with a recording medium ID, which corresponds to and is unique to the recording medium, the recording medium ID obtained from a predetermined region of the recording medium, the recording medium ID pre-recorded on the predetermined region of the recording medium.

Claim 20 (Original): The data reproducing apparatus as set forth in claim 19, wherein the digital data is encrypted by the data identification information and recorded to the recording medium, and the encrypted digital data is reproduced from the recording medium along with the encrypted data identification information and data control information, and the write identification information.

Claim 21 (Previously Presented): The data reproducing apparatus as set forth in claim 20, wherein the encrypted data identification information and data control information, and the write identification information are encrypted by the use of the recording medium ID and recorded to the recording medium, and the recording medium ID is reproduced from the recording medium, and the data encrypted by the recording medium identification information are decrypted by the use of the recording medium ID, and the encrypted data identification information and data control information, and the write identification information are taken out.

Claim 22 (Currently Amended): A data recording and/or reproducing system comprising:

a data recording and/or reproducing apparatus for reproducing encrypted data which are encrypted by the use of independent write identification information that is created for every recording operation performed on the digital data from a recording medium; and

a data processing apparatus for decrypting the encrypted data and obtaining data identification information of the digital data and data control information from the reproduced data,

wherein the data recording and/or reproducing apparatus has means for reproducing the write identification information and the encrypted data from the recording medium, and means for transmitting the reproduced data to the data processing apparatus, and

wherein the data processing apparatus decrypts the encrypted data which are encrypted by the use of the write identification information created during a recording operation using the data recording and/or reproducing apparatus, and obtains the data identification information of the digital data and data control information, said write identification information being decrypted by a recording medium ID that corresponds to and is unique to the recording medium, the recording medium ID obtained from a predetermined region of the recording medium, the recording medium ID pre-recorded on the predetermined region of the recording medium.

Claim 23 (Original): The data recording and/or reproducing system as set forth in claim 22, wherein the digital data is encrypted by the data identification information and recorded to the recording medium, and the data recording and/or reproducing apparatus reproduces the encrypted digital data from the recording medium along with the encrypted data identification information and data control information, and the write identification information.

Claim 24 (Previously Presented): The data recording and/or reproducing system as set forth in claim 22, wherein the encrypted data identification information and data control information, and the write identification information are encrypted by the use of the recording

medium ID and recorded to the recording medium, and the recording medium ID is reproduced from the recording medium, and the data encrypted by the recording medium ID are decrypted by the use of the recording medium ID, and the encrypted data identification information and data control information, and the write identification information are taken out.

Claim 25 (Previously Presented): The method of claim 1, wherein said generating step includes generating the write identification information with a random number generator.

Claim 26 (New): The method of claim 1, wherein said predetermined region of the recording medium is the table of contents (TOC) region of the recording medium.
